Shobers Run Habitat Improvement and Sediment Reduction

2074 to 2023

Shobers Run Habitat Improvement and Sediment Reduction

Phase One (2021) – Construction of two modified mud-sills and two log-framed stone deflectors

Phase Two (2023) – Filling and regrading stream bank above and behind larger Phase One mud-sill

Phase Three (2023) – Construction of nine additional devices upstream from the Phase One work

These two images illustrate the main area of focus for Phase One from upstream (right) and downstream (below). The landowner of the property with the blue shed was the first to contact the CD and FBTU. This site has the largest area of eroding vertical stream bank in the entire project area.

These photos were taken on February 4, 2020

August 5, 2021 – Upstream and 'around-the-corner" from the large mud-sill location, a small mud-sill and root wad were placed on an undercut eroding bank.

Note: This work corresponds to the device to the left of the "B" on the plan view aerial photo of the project area.

August 6, 2021 – Cutting first trenches and placing sill logs.

Note: This work corresponds to the device to the left of the "A" on the plan view aerial photo of the project area.

August 6, 2021 – Placing and pinning face logs.

Note: This work corresponds to the device to the left of the "A" on the plan view aerial photo of the project area.

August 6 – The pros from Dover

August 7 – Large rock appears on mud-sill.

August 7 – Log-framed rock deflector adjacent to large mudsill.

August 7, 2021 – Seeding and mulching.

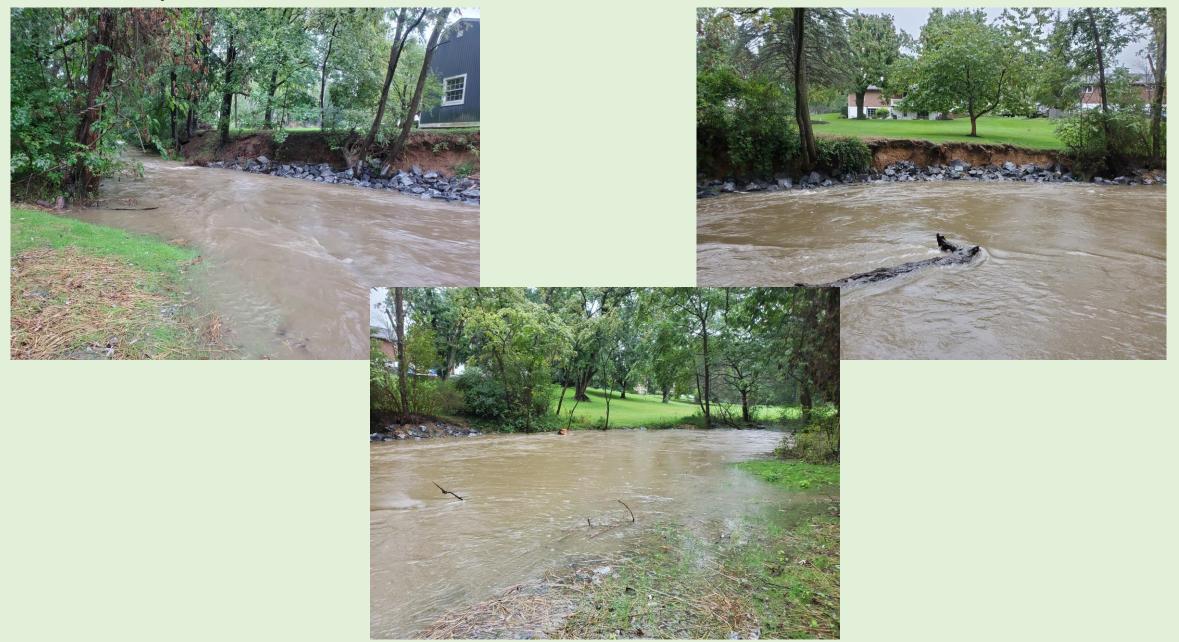

August 9, 2021 – Looks good, just need a little rain

August 7, 2021 – Smoothing tire ruts and picking rocks.

Phase One – September 1, 2021 – Ida – bankfull

Phase Two – September 2023

Phase Two – October 25, 2023

Next steps in Phase Two :

Plant warm season grasses and shrubs (shrub dogwoods, arrowwood viburnum, black chokeberry), possibly river birch or speckled alder

Phase Three – July 19 – 21, 2023

July 19th was a short workday due to a broken gas hammer, i.e. "Whacker".

Back to work on the 20th with a borrowed hammer (thank you Butch and MLTU!).

Note: This work corresponds to the device to the left of the "D" on the plan view aerial photo of the project area.

Phase Three – July 20, 2023

An assist from BCCD intern Rhianna. Thank you!

Note: This work corresponds to devices between "C" and "D" on the plan view aerial photo of the project area.

Phase Three – July 21, 2023

And on the last day of construction work, guest appearances from some Stream Guardians. Thank you Jim and Jay! Did he ever actually swing that hammer?

Note: This work corresponds to devices near "C" on the plan view aerial photo of the project area.

Phase Three – August 8, 2023

18 days later, we stopped to see how well the grass was coming along after a long dry spell. Not so good.

The long deflector at "C".

The mod mud-sill at "D".

Phase Three – August 8, 2023

But, did you catch this in that last photo?
